Evolutionary Saddles™
The Future in Saddlery

HVE

Revolutionizing the flex saddle for all riding styles from Endurance to Dressage!

Designed for gaited and non-gaited horses & mules in all shapes & sizes.

Where fitting your horse and mule is our number one priority.

EvolutionarySaddles.com

Evolutionary Saddles™ introduces the ultimate flexible panel saddle!

The Evolutionary Saddles™ flexible panel saddle with System X delrin construction is a quantum leap forward in saddle design. After thousands of hours of in-saddle field-testing and many advances in technology, Tauer Manufacturing LLC has produced exactly what every serious rider dreams of — a saddle for all horses! That's right, one saddle that conforms to almost every back shapes, allowing you to use one saddle on many horses with little more effort than selecting the proper girth or cinch. The System X saddle has the only saddle fit system so adaptable that that it comfortably fits most horses and mules, no matter his shape or size. Whatever conformation issues are present, the appropriate saddle model correctly fitted should provide the answer.

What makes the Evolutionary Saddles™ System X the saddle for the 21st Century?

- A rigid tree that supports the rider
- Panels composed of several layers of delrin that, combined with the unique mounting system, distribute the rider's weight over the entire length of the panel, while allowing the horse's back and shoulders complete freedom of motion
- A ball and socket joint inserted on a specialized saddletree that automatically addresses criteria such as gullet sizes, twist, flare, and rocker.
- A horse and rider satisfaction guarantee.

All of these finely crafted saddles are made in the United States.

English and endurance saddles come with adjustable rigging, hardware rigging D-rings, a seat option and stirrup leather option and a Saddle Sox™ pad.
